INOX debuts WS-90 Wall Strike with industry-first interlocking bracket design
WS-90 Wall Strike easily installs directly on the wall and prevents tampering or damage to the strike or lock bolt

SACRAMENTO, CA – [INOX](#) has introduced the [WS-90 Wall Strike](#), a surface-mounted wall strike designed for INOX's PD5000, PD8000 and PD9000 series of barn door and sliding door locks. The WS-90 Wall Strike is the first in the industry to use an interlocking bracket design within the strike, and its modern design conceals all screws to prevent tampering or damage to the strike or lock bolt.

The patent-pending WS-90 Wall Strike easily installs directly on the wall. As the door is closed, the unique interlocking bracket within the strike holds the latch securely in place so the door may be locked with a key from the outside of the room.

“Barn doors are resurfacing as a popular design trend. Unlike a pocket door, however, there is no traditional jamb to lock into and the only option currently is to build an additional jamb, which is costly,” said Qianyan Cheng, INOX co-founder and Vice President of Product Development. “With the WS-90 Wall Strike, a home office space or wine cellar can be securely and completely locked and its clean, sleek design integrates seamlessly with any aesthetic.”

[TWEET THIS: The patent-pending WS-90 #WallStrike from @Inox Hardware is a surface-mounted wall strike that provides a locking solution for barn doors and sliding doors and prevents tampering or damage to the strike or lock bolt. <https://youtu.be/bKZPRji2hfw>](#)

The patent-pending WS-90 Wall Strike easily installs directly on the wall to enable barn doors or sliding doors to lock from the outside. A 1/8-inch shim is included to accommodate tracks with greater spacing from the wall to the center line of the strike.

Key Features of the WS-90 Wall Strike

- The hardware is equipped with an **interlocking mounting bracket** that conceals all visible screws when the door is in a locked position, preventing tampering with the strike or lock bolt.
- The WS-90 Wall Strike is constructed from **solid 304 stainless steel** to provide maximum durability across a wide variety of residential, commercial and industrial applications.

The WS-90 Wall Strike is available in Satin Stainless Steel, Graphite Black and select CeraMax ceramic coating finishes.
